Frequently asked questions

Que désigne le terme « biodégradable » ?

Un matériau biodégradable est celui qui peut se décomposer en des éléments chimiques naturels grâce à l'action d'agents biologiques tels que des bactéries, des plantes ou des animaux, avec d'autres agents physiques comme le soleil ou l'eau, dans des conditions environnementales qui existent dans la nature. Cela permet à ces substances de se transformer en nutriments, en dioxyde de carbone, en eau et en biomasse. Tous les matériaux sont dégradables, mais le facteur déterminant est la vitesse à laquelle ils se biodégradent, qui sera influencée par les conditions d'exposition et par les caractéristiques propres du matériau comme la taille moléculaire, les mélanges, les additifs, les groupes fonctionnels ou la flexibilité.

Quelques exemples de temps de biodégradabilité : les mouchoirs en papier, de 1 à 12 mois ; la corde, de 3 à 14 mois ; le bois, de 1 à 3 ans ; une bouteille en verre, presque 4.000 ans ; le fer, d'1 an à plusieurs millions d'années, selon le type de fer ; le polystyrène, de 450 à 1.000 ans.

Che cos'è biodegradabile?

Sono biodegradabili i materiali che si possono dissolvere negli elementi chimici che li compongono grazie all'azione di agenti biologici come batteri, piante, animali e altri agenti fisici come il sole e l'acqua, in condizioni ambientali naturali. Così facendo, queste sostanze si trasformano in sostanze nutritive, diossido di carbonio, acqua e biomassa.

Tutti i materiali sono degradabili, ma il fattore determinante è la velocità con cui avviene il processo di biodegradazione, che dipenderà dalle condizioni della loro esposizione e dalle caratteristiche del materiale stesso come la dimensione molecolare, miscele, additivi, gruppi funzionali o flessibilità.

Ecco alcuni esempi di tempi di biodegradabilità: fazzoletti di carta, da 1 a 12 mesi; corda, da 3 a 14 mesi; legno, da 1 a 3 anni; bottiglie di vetro, 4.000 anni circa; ferro, da 1 a diversi milioni di anni a seconda del tipo di ferro; polistirene, da 450 a 1.000 anni.

What is biodegradable?

A biodegradable material can be broken down into natural chemical elements by the action of biological agents such as bacteria, plants or animals, aided by other physical agents as sunlight or water, under environmental conditions that occur naturally. This way, these substances are transformed into nutrients, carbon dioxide, water and biomass.

All materials are biodegradable, but the determining factor is the rate at which they biodegrade, which would be affected by exposure conditions as well as characteristics of the material such as molecular size, mixtures, additives, functional groups or flexibility. Here are some examples of the time it takes for certain materials to break down: paper tissues, from 1 to 12 months; rope, from 3 to 14 months; wood, from 1 to 3 years; a glass bottle, around 4,000 years; iron, from 1 to several million years depending on the type of iron; polystyrene, from 450 to 1,000 years.

Que veut dire le terme « compostable » ?

Le terme « compostable » signifie qu'un matériau peut être dégradé sous l'action d'organismes, c'est-à-dire, biologiquement, en produisant du dioxyde de carbone, de l'eau, des composés inorganiques et de la biomasse (compost) sur une période contrôlée et dans des conditions déterminées. La norme européenne EN 13432 définit les caractéristiques que doit revêtir un matériau pour être considéré comme compostable en cycle industriel. Ceci s'applique à tous ses composants, teintés et additifs.

Le compostage domestique est un processus plus difficile et possédant un rythme plus lent que celui réalisé en milieu industriel, puisque la température en compost de jardin est plus basse et moins constante.

Que ce soit dans sa version industrielle ou domestique, le compostage est une alternative très recommandée pour éviter le déversement des déchets dans des vide-ordures ou les incinérations, deux procédés très coûteux et contaminants.

Che cos'è compostabile?

Un materiale è compostabile se può essere degradabile mediante l'azione di organismi, e quindi biologicamente, producendo diossido di carbonio, acqua, composti inorganici e biomassa (compost) in un periodo di tempo controllato e rispettando determinate condizioni. La normativa europea EN 13432 definisce le caratteristiche che un materiale deve possedere per potersi definire compostabile in un impianto di compostaggio industriale. Ciò si applica a tutti i suoi componenti, inchiostri e additivi.

Il compostaggio domestico è un processo più complicato e dal ritmo più lento di quello realizzato in un impianto industriale, poiché la temperatura nel compost da giardino è più bassa e meno costante.

Sia nella versione industriale che domestica, il compostaggio è un'alternativa altamente consigliata per evitare lo smaltimento dei residui in discariche o il ricorso a inceneritori, molto costosi e inquinanti.

What is compostable?

Compostable means a material can be degraded through the action of microorganisms, which means, biologically, producing carbon dioxide, water, inorganic compounds and biomass (compost) in a controlled period of time and under determined conditions. The European standard EN 13432 defines the characteristics that a material must possess in order to be defined as compostable in an industrial composting plant. This applies to all of its components, inks and additives.

Domestic composting is a slower and more difficult process than that undertaken in an industrial environment, as the temperature in garden composting is lower and less constant. Whether industrial or domestic, composting is a highly recommendable alternative to the dumping of garbage in landfills or its incineration, which is very expensive and polluting.

vs.

Quelle est la différence entre les termes « compostable » et « biodégradable » ?

Ces deux processus sont une dégradation de la matière jusqu'à la décomposer en éléments chimiques qui la forment.

La biodégradation est un processus naturel où la vitesse de dégradation est directement liée à de nombreux facteurs, tandis que le processus de compostage est un processus contrôlé, réalisé dans un environnement dans lequel les conditions accélèrent la dégradation jusqu'à obtenir un engrais organique.

Ainsi donc, la biodégradabilité est un processus lent effectué par la nature. En revanche, la compostabilité est un processus rapide réalisé par l'homme.

Qual è la differenza tra compostabile e biodegradabile?

I due processi sono una degradazione della materia fino a scomporla negli elementi chimici che la compongono.

Mentre la biodegradazione è un processo naturale in cui la velocità di degradazione dipende da molti fattori, il processo di compostaggio è un processo controllato, in un ambiente in cui le condizioni operative accelerano la degradazione fino a ricavare concime organico.

Pertanto, possiamo riassumere che la biodegradazione è un processo lento realizzato dalla natura, mentre il compostaggio è un processo veloce realizzato dall'uomo.

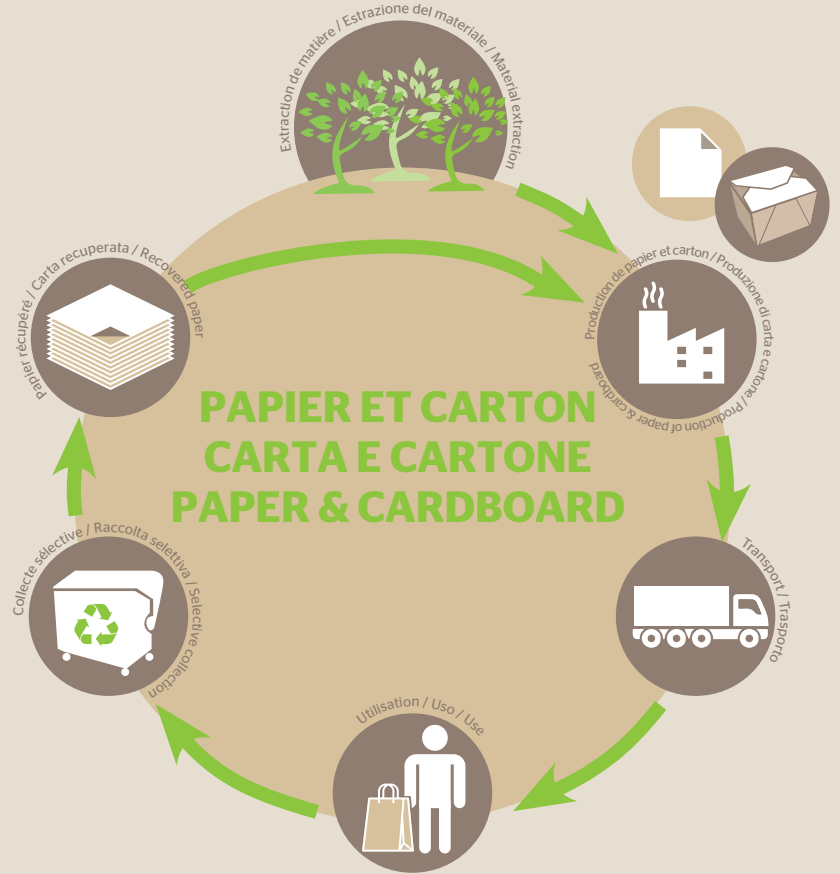

What is the difference between compostable and biodegradable?

The two processes concern the degradation of a material before it decomposes in the chemical elements that make it.

While biodegradation is a natural process, in which the rate of decomposition is affected by many factors, composting is a controlled process in an environment where operating conditions speed up the degradation process until organic fertiliser is obtained.

Therefore, we can summarise biodegradation is a slow process carried out by nature, whereas composting is a fast process performed by humans.

PAPIER ET CARTON CARTA E CARTONE PAPER & CARDBOARD

Le papier et le carton sont-ils compostables ?

Tous les papiers et cartons ne sont pas compostables. La grande vertu du papier et du carton est qu'ils sont 100 % recyclables et peuvent l'être jusqu'à 10 fois. De plus, ils sont tous biodégradables. Ils sont désintégrés entre 1 et 12 mois selon leur composition.

Grâce à ces caractéristiques, le papier et le carton sont des matériaux avec un faible impact environnemental.

La carta e il cartone sono compostabili?

Non tutti i tipi di carta e cartone sono compostabili. Il grande pregio della carta e del cartone è che sono entrambi 100% riciclabili e possono essere riciclati fino a 10 volte. Inoltre, sono entrambi biodegradabili. Impiegano da 1 a 12 mesi a disintegrarsi, a seconda della composizione. Grazie a queste caratteristiche, la carta e il cartone sono materiali a basso impatto ambientale.

Are paper and cardboard compostable?

Not all paper and cardboard is compostable. The great benefit of paper and cardboard is that they are 100% recyclable and can be recycled up to 10 times. Furthermore, they are biodegradable. It takes between 1 and 12 months for them to break down, depending on their composition. Thanks to these characteristics, paper and cardboard are materials with low environmental impact.

Quelle est la différence entre un produit recyclé et un produit recyclable ?

Un produit recyclé est un produit réalisé totalement ou partiellement à partir de résidus, c'est à dire, à partir d'un matériau déjà utilisé antérieurement.

Le verre, le papier et le bois sont des matériaux recyclés communs, puisqu'il s'agit d'un processus relativement simple afin d'obtenir une matière première pour créer de nouveaux produits.

Un produit recyclable est un produit apte pour le recyclage, c'est-à-dire qu'il peut être transformé pour l'obtention de matière première pour une nouvelle utilisation. La grande majorité des matériaux utilisés à grande échelle sont recyclables.

Qual è la differenza tra un prodotto riciclato e un prodotto riciclabile?

Un prodotto riciclato è un prodotto fatto totalmente o parzialmente di residui, cioè di materiali che sono stati usati in precedenza.

Il vetro, la carta e il legno sono i materiali riciclati più comuni, poiché con processi relativamente facili possiamo riottenere materia prima per creare nuovi prodotti. Un prodotto riciclabile è un prodotto adatto al riciclaggio, cioè può essere sottoposto a ulteriori processi allo scopo di ricavare materia prima per il suo riutilizzo. La maggioranza dei materiali usati su grande scala è riciclabile.

What is the difference between a recycled and a recyclable product?

A recycled product is a product made fully or partially from waste; in other words, from a material that has been previously used.

Glass, paper and wood are the most common recycled materials, since through relatively easy processes we can once again obtain from them raw materials in order to create new products.

A recyclable product is a product suitable for recycling; in other words, it can undergo processes for the purpose of obtaining raw materials for subsequent use. The vast majority of materials used on a large scale are recyclable.

Qu'est ce que le PLA et le CPLA ?

Le PLA est un bioplastique qui s'obtient à partir de ressources 100 % naturelles comme l'amidon de maïs, canne à sucre, manioc. Il provient donc de sources renouvelables. Ce matériau est apte au contact alimentaire et est à la fois biodégradable et compostable.

Le CPLA est un PLA cristallisé, et présente une plus importante résistance thermique et rigidité.

Che cosa sono il PLA e il CPLA?

Il PLA è una bioplastica che si ottiene a partire da risorse 100% naturali come l'amido di mais, la canna da zucchero o la manioca, per cui deriva da risorse rinnovabili. È adatto al contatto col cibo ed è biodegradabile e compostabile.

Il CPLA è il PLA cristallizzato e ha quindi maggior resistenza termica e durezza.

What does PLA and CPLA mean?

PLA is a bioplastic obtained from 100% natural resources such as corn starch, sugar cane or cassava, which means that it is derived from renewable resources. It is suitable for food contact and is biodegradable and compostable.

CPLA is crystallised PLA, which means that it is stronger and more heat resistant.

Les articles en bagasse "BIONIC" sont-ils compostables ?

Les produits réalisés à partir de pâte d'origine végétale comme la canne à sucre sont compostables. Pour pouvoir être considérés comme tel, ils doivent répondre à la norme EN 13432 qui prévoit que ces produits ne contiennent pas de substances chimiques. C'est le cas de la gamme BIONIC de García de Pou.

Gli articoli di bagassa "BIONIC" sono compostabili?

I prodotti fatti in pasta d'origine vegetale come la canna da zucchero sono compostabili. Per poter essere considerati compostabili, questi prodotti devono rispettare la normativa EN 13432 per cui dovranno essere privi di sostanze chimiche, come nel caso della linea BIONIC di García de Pou.

Is the BIONIC line of items made from compostable bagasse?

Products made from plant-derived pulp such as sugar cane are compostable. In order to be considered compostable, these products must comply with standard EN 13432, and as such must be free from chemical substances, as is the case of García de Pou's BIONIC line.

TISSUE DOUBLE POINT®

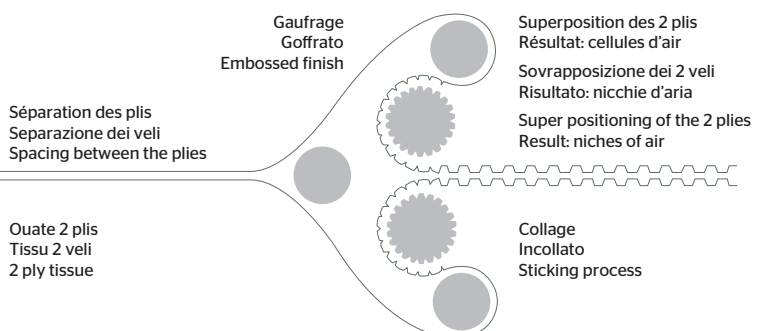

Les serviettes Double Point® sont fabriquées par l'intermédiaire d'un nouveau système de micro-gaufrage. Ce gaufrage permet aux serviettes d'être plus qualitatives au touché et à l'absorption. Il s'agit du meilleur rapport qualité/prix du marché, légèrement plus cher que les serviettes 2 plis mais avec une qualité qui s'approche des serviettes voies sèches.

I tovaglioli Double Point® sono prodotti con un nuovo sistema di produzione che si basa sull'incollaggio di 2 veli di tessuto con micro punti. Questo sistema d'applicazione fa sì che i tovaglioli si presentino più soffici e voluminosi, il che li rende più attraenti. Il prezzo è leggermente superiore ad un 2 veli tradizionale ma nel contempo costano la metà dei tovaglioli airlaid.

Double Point® napkins are manufactured with a production system based on the glueing of two plies of tissue by micro points. This glueing process allows the plies to become both more voluminous and smooth, lending to a beautifully shaped napkin.

The price of Double Point® napkins is slightly higher to the 2 ply napkins and are half the price of the airlaid napkins.

FEUILLE DE PALME FOGLIE DI PALMA PALM LEAF

areca

Vaisselle en feuille de palme
Stoviglie di foglie di palma
Palm leaf dinnerware

**FEEL[®]
GREEN**

Assiettes et bols légers mais rigides et résistants qui sont aptes pour une utilisation au microondes (max. 2 min.), au four (max. 180°C durant 1,5 min.) et pour le congélateur. Ces produits permettent de contenir des aliments chauds, liquides, et avec huiles. Ils sont totalement stérilisés et prêts pour être utilisés. Le processus de fabrication est très simple: collecte des feuilles de palme tombées, qui sont ensuite nettoyées en profondeur avec l'application de vapeur et de pression pour transformer les feuilles en produit durable. De cette manière, une vaisselle 100% naturelle est obtenue et la texture de la feuille ainsi que sa couleur sont maintenues. Ces produits sont biodégradables compostables, et peuvent être utilisés comme fertilisants 60 jours après leur emploi. Produit sans agents chimiques.

Piatti e coppette leggeri ma nello stesso momento duri e resistenti adatti anche per il microonde (max. 2 min.), il forno (max. 180° per 1,5 min.) e il freezer. Consentono di contenere cibo caldo, liquidi e oli con assoluta normalità. Totalmente sterilizzati e pronti all'uso. Il processo di produzione è semplice: si raccolgono le foglie secche di palma d'areca, si puliscono in profondità e si applica del vapore a pressione per trasformare le foglie in prodotti durevoli. Così facendo si ottengono delle stoviglie usa e getta 100% naturali che mantengono la trama e il colore naturale della foglia. Sono biodegradabili e compostabili, per cui possono essere usati come fertilizzanti 60 giorni dopo l'uso. Prodotto ecologico e privo di agenti chimici.

These plates and bowls are lightweight but also strong and sturdy and are microwave (2 min. max.), oven (1,5 min. max. at 180°C) and freezer safe. They can be used to hold hot food, liquids and oil. They are fully sterilised and ready for use. The production process is simple: fallen leaves from the areca plant are collected and then thoroughly cleaned. Steam and pressure are then applied to the leaves to transform them into durable products. In this way, 100% natural disposable plates are obtained, maintaining the colour and texture of the leaves. They are biodegradable and compostable and can therefore be used as fertilizer 60 days after use. Chemical-free product.

FLUSHABLE

Rince-doigts Salviettina Wipes

ROLL·IT

94% des rince-doigts présents sur le marché ne sont pas FLUSHABLES puisqu'ils sont réalisés avec du polyester, de la viscose et du polypropylène. C'est pourquoi, ils ne peuvent pas être jetés dans les toilettes.

Les 6% restants, sont dits flushables mais contiennent un liant chimique et de ce fait, ils ne sont pas naturels à 100%. Ils ne sont pas biodégradables et pas d'origine naturelle.

Une nouvelle technologie sophistiquée a permis la fabrication du premier papier qui offre la possibilité de développer les rince-doigts flushables 100% naturels et biodégradables :

- Sans liants chimiques
- Résistance optimale à l'humidité
- Forte capacité absorption
- Désintégration rapide
- Matière première naturelle et renouvelable avec la certification forestière PEFC

Il 94% delle salviettine sul mercato non sono FLUSHABLES, ma sono in fibra di poliestere, viscosa, polipropilene, ecc. Pertanto, in nessun caso possono essere gettate nel WC.

Il restante 6% sono flushables, però contengono qualche tipo di legame chimico, pertanto non sono al 100% naturali e biodegradabili o con fibra naturale originale.

Una nuova sofisticata tecnologia ha permesso la fabbricazione della prima ed unica carta che consente di produrre salviette FLUSHABLE, al 100% naturali e biodegradabili:

- Senza leganti chimici
- Ottima resistenza al bagnato
- Alta capacità di assorbimento
- Disintegrazione rapida
- Materia prima naturale, rinnovabile con certificazione forestale PEFC

94% of towelettes in the market are non - flushable as they are made of polyester, viscose, polypropylene and so on. The remaining 6%, although FLUSHABLE, contain chemicals. They are not 100% natural, biodegradable or made of natural fibers.

A new and sophisticated technology has allowed the production of the first sole 100% natural and biodegradable paper flushable towelettes:

- No chemical binder
- Optimal resistance in moist condition
- High absorption
- Quick disintegration
- Natural, renewable and PEFC forestry certificated raw material

PLA

PLA

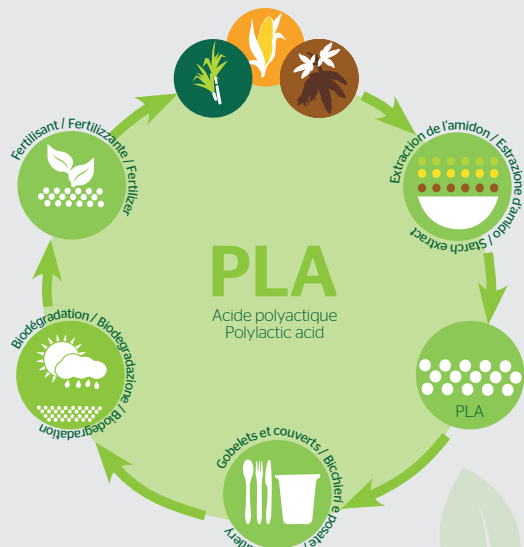

Le PLA est un bioplastique qui s'obtient à partir de ressources 100% naturelles comme l'amidon de maïs, la pulpe de canne ou le manioc. Il est biodégradable et compostable. Il est écologique et économique. Apte pour les aliments. Apte pour le congélateur. Produit solide et robuste, avec une apparence élégante. Avec les restrictions et interdictions généralisées sur l'utilisation des plastiques dérivés du pétrole, le PLA est une alternative adaptée à l'instar du carton. De cette manière, ces produits contribuent au maintien de l'environnement et à la réduction de l'empreinte carbone.

Il PLA è un materiale bioplastico che si ottiene a partire da risorse 100% naturali come l'amido di mais, la canna da zucchero o la manioca. È biodegradabile e compostabile, ecologico ed economico. Adatto per gli alimenti. Adatto per il freezer. Prodotto forte e robusto, dall'aspetto elegante. Con le restrizioni e divieti globali sull'uso della plastica derivante dal petrolio, il PLA è l'alternativa ideale oltre al cartone. L'utilizzo dello stesso contribuisce al mantenimento dell'ambiente pulito grazie alla riduzione dell'emissione di gas serra.

PLA is a bioplastic obtained from 100% natural resources such as cornstarch, sugarcane or cassava. It is biodegradable and compostable as well as eco-friendly and economical. It is suitable for food and is freezer safe. It is a strong and robust product with an elegant appearance.

Due to the worldwide restrictions and bans on the use of plastics derived from petroleum, PLA is an ideal alternative as well as cardboard. By using it you can contribute to conserving the environment and reducing your carbon footprint.
